A Cryptocurrency
Trading Card Platform
WHITEPAPER

Table of Contents

Intro

Since its inception in 2008, interest in cryptocurrency and blockchain technology has grown steadily. In February 2021, the term NFT jumped into the public consciousness. Now everyone is on the NFT bandwagon, from the NBA to Sotheby's to Gucci. Cryptocurrency is arguably entering the early majority adopter's phase of the technology curve.

Unfortunately, a competitive review of the NFT landscape suggests most projects boil down to one of two things: a fool's quest for shiny objects or a hack job of low-quality auto-generated NFTs. Whitepapers stuffed with technical jargon and theoretical advancements in technology have created an industry where very few projects succeed. Thousands of altcoins have been left by the wayside. Crypto sites that haven't updated since they went live in 2018 litter the web. The state of the marketplace is not much better.

At TenshiGirl, our goal is to use proven-edge technology to create a stable market built to support its members and promote quality NFTs from renowned artists. Focusing on creating value in a sustainable and cryptographically advanced way provides a practical path forward. Our goals will remain attainable and straightforward; create a decentralized NFT platform positioned for the commercial marketplace. To expedite propagation, we will provide incentives and rewards for all ecosystem players.

The commitment to proven-edge technology is a significant advantage. Several exciting additions to Ethereum Improvement Proposals (EIP) and Ethereum Requests for Comments (ERC) standards have emerged from the web3 community that haven't seen wide-scale adoption in the commercial sector. We will use traditional models and marketing strategies to capture the value of these under-utilized technologies. We'll adopt Layer 2 scaling to improve performance and decrease infrastructure expense. Social media and gamification integration will encourage broad adoption and a healthy, engaged community.

Our success does not rely on unproven or non-existent technology and unstable web3 dependencies. This independence lowers our participants' risk, reduces development expenses, and decreases our time to market. Our growing rolodex of internationally recognized artists committed to promote our brand improves our product's perceived value and maintains a high standard of quality. The team's experience with www and national marketing campaigns will present dozens of opportunities to facilitate widespread adoption on the Ethereum mainnet and beyond.

The Marketplace Today

Though the primary NFT marketplaces, namely Opensea, Rarible, and Mintable, are hosting a wide variety of Collections and Tokens, it's fair to say that quantity far outweighs quality. Web3 technology continues to present lag. Images are slow to load, wallet connections are spotty, and digital signatures often stall and can take minutes to complete. User interfaces are practically afterthoughts, and NFTs are challenging to browse or filter. This process is suboptimal for even experienced cryptocurrency users.

Traditional consumers comfortable with the instant digital transactions of centralized hosting will balk at these web3 limitations. And those consumers are critical to mass adoption. The company that solves these problems will be positioned as a market leader well into the late majority phase of adoption.

Opensea ranks 2192 different Trading Card NFT projects as of April 11, 2021. 94% of those projects traded nothing in the last seven days. Only the top 142 have any seven-day trading volume, and only the top 29 breaks one eth in trading. Even the top performers are suffering; eight of the top ten Collections are trending down in trading volume, as sharply as 50%, 70%, and 90%. User adoption is also lacking. The top 10 ranking Collections represent 7,299,693 NFTs but are in only 45,565 wallets.

We will capitalize on this opportunity with a strong vision and strategy to establish marketplace dominance. Our initial focus will be on top 10 ranking in key metrics: the number of owners, trading volume, and average price in the NFT markets listed above.

The Tenshiverse makes use of tenshigirl.io, a Liquidity Pool, Layer 2 scaling on the Ethereum mainnet through the Polygon network, Ethereum Request for Comments (ERC) and Ethereum Improvement Protocols (EIP) standards, and smart contracts to create a secure, sustainable virtual ecosphere.

Creating Value

Our value proposition has a strong foundation built with highest quality, scarce quantities, and an incentivized community. TenshiGirl sources renowned anime artists with established fan bases for this bespoke artwork. The artists also contract with us to promote their artwork during the marketing phase of release.

We will provide branded, attractive marketing materials to our artists and encourage their fan base to re-share on social media, extending our brand and introducing our product to the traditional marketplace. With the buzz around NFTs, many people new to crypto want to participate but don't have the technical know-how.

TenshiGirl provides a simple, affordable entry point for this untapped resource. We expect this to speed adoption and create demand away from the limited scope of the crypto marketplaces.

Quality

Quality will also drive the traditional aspects of the trading cards. A developed story line and world will provide a vibrant backdrop to sixty initial characters, each with detailed descriptions, unique statistics, and personality characteristics. Customization and improvement is possible through game play, meaning every card is unique and may grow in value.

Quantity

We have carefully considered the type and number of pieces in each product and their release method. In addition to a thorough review of the competitive environment, our team has consulted with an actuary and experienced web3 users to address risks, select our initial sales model, and ensure a fair, randomized distribution of trading cards.

We take advantage of exclusivity, using our high-quality artwork, and add scarcity, significantly limiting the number of tokens created. We also commit to adding no further tokens, of any type, to existing Collections. Additionally, to improve value over time, tokens each have a deflationary aspect.

Community

We've encoded community roles at the Smart Contract level. Leveraging the EIP 2981 Royalty standard, each transaction in the secondary marketplace will result in a Royalty. That fee benefits Affiliates and Artists, as well as Developers and Founders. However, the most significant percentage of the Royalty will benefit TGFund Holders and Distributors.

Each Collection is associated with one (1.00000000) TGFund Token. NFT Holders, NFT Distributors, and the Founders and Developers will be allotted a percentage of each of the two TGFund Tokens. No additional tokens will be minted for existing Collections.

All TGFund Token holders will receive a percentage of the TGFund Royalty relative to their total Token Reward. Token Rewards are calculated on a per-wallet basis.

Team Roles

In our formative stages the founder and co-owners will fulfill both executive and management roles. We will make use of traditional C-Corp organization to define individual jobs and responsibilities. Hiring for the management roles will be a priority once we've passed the Go Live day.

Xero

Chief Executive Officer, Chief Marketing Officer, Business Development

Xero is the founder of the TenshiGirl concept. He is an experienced entrepreneur, business developer, and business administrator. He has participated in cryptocurrency as an investor and project moderator since 2014.

guyinthetie

President, Chief Technology Officer, Project Manager

guyinthetie has 25+ years in the IT industry, providing project leadership, project development, and technology solutions to markets like energy trading, data warehousing, education, real estate, and finance.

3stars

Chief Information Officer, Lead Developer

3stars is a twenty-year business owner who has programmed enterprise-class online marketing systems, business intelligence dashboards, and dozens of custom software applications. She is an experienced database designer and practicing web3 developer.

The Art

Highest quality digital artwork in the anime tradition presented as two Collections of ERC721 tokens on the Ethereum mainnet using Polygon's Layer 2 scaling solutions.

Artists

Premier Artist

Our Premier Artist is Argentinian-born Inhoso. His crisp, clean style and vibrant characters are a fantastic beginning to the TenshiGirl brand. We count ourselves lucky to have his participation. Inhoso has experience with games, illustration books, and has worked with ADHD Kids Rock.

Himitsu Artists

Our Himitsu Artists are high profile artists selected from the anime community for their excellence and experience in this broad yet distinctive style of artwork.

Paul "Zeronis" Kwon

Paul Kwon, formerly of Blizzard and Riot Games, is well-know for his work as Senior Concept artist while working on League of Legends. He is creating the Private Exclusive NFT, a Himitsu Dark trading card. He's fast approaching 1 million followers, and we hope to get him over that mark with our Private and Presale promotions.

Asia Ladowska

Asia Ladowska is an independent artist, illustrator, and author of Sketch with Asia: Manga Inspired Art and Tutorials. Her illustrations have been published in Udon Comics, Vampirella #1, have been featured cover art on ImagineFX magazine, and more. She has created our Public Presale Exclusive, a Himitsu Light trading card.

Her well-managed social media platforms compliments the beauty and impact of her artwork, garnering her well over 1.7 million followers.

Headliners

Our Headline artists are Afia Waleed, Chark Art, Irvin Ryan Tiu, Jensen, Mark Kong, Siznart, and Tiger June. Each are skilled in their craft and have garnered a healthy following in their spaces. See the website for more detailed artist bios.

The Tenshiverse

The Tenshiverse ecosphere presents opportunities for Community Members to earn Token Rewards and a Royalty from after-market transactions, according to their role. One person may fulfill multiple roles.

Each Collection of NFTs is associated with a TGFund Token. We have two Funds: Founders Fund, and Collection One Fund. Whenever an NFT transaction occurs a Royalty is assessed and transmitted to the Fund.

Tokens

These tokens do not represent ownership. They are designed as utility and payment units between network participants.

TGFund Token. 1.00000000 fungible ERC20 TGFund Tokens associated with each TenshiGirl Collection. Our initial Collections are the Founders Run and Collection One: Knights of the Veil.

Holders of TGFund Tokens receive a percentage of each after-market transactions Royalty, proportionate to the amount of TGFund Token held.

- ✦ **New Collections will have their own TGFund Token.**

- ✦ **This is does not require staking or generate liquidity tokens.**

- ✦ **Closed ecosystem.** No additional TGFund Tokens will be produced for existing Collections.

TGSwap Token. 100,000,000 ERC20 tokens at a Liquidity Pool. Exchange TGSwap Tokens at tenshigirl.io for Cases, Boxes, and 6-Packs. At least one (1) Rare drop or better in every 6-Pack.

TGSwap Tokens are deflationary in nature.

Collection One: Knights of the Veil. 61 ERC721 NFT trading cards in the anime style of attractive, powerful female characters. 15 Common, 12 Uncommon, 10 Rare, 8 Exotic, and 5 Legendary, 5 Enveiled, 3 Himitsu, 3 Legendary Gold.

Himitsu are not found in packs. Get them exclusively during the Founders Run Private Sales and Public Presale.

Wrapped Products. 80% of Collection One will be collated into Wrapped Products. A True Random Number Generator (TRNG) will be used to randomize critical parts of the process.

This will result in each 6-Pack containing at least one Rare or better.

CASES	BOXES	6-PACKS
CONTAINS 8 BOXES	CONTAINS 24 PACKS	CONTAINS 6 NFTs

TGSwap Tokens. TGSwap may be exchanged for Collection One Wrapped Products: Cases, Boxes, and 6-Packs.

100% of ERC20 TGSwap Tokens are burned after being exchanged for Wrapped Products. Additional TGSwap Tokens are minted as new Collections are released.

TGSwap Tokens   Wrapped Products   Burn

Random Draw. 20% of Collection One will be used as a Random Reserve of individual cards sorted by Rarity.

TGSwap Tokens may be exchanged for a random card from any level of Rarity at market value while supplies last.

Upon sorting, each stack is randomized (TRNG) and loaded into a Vault supporting First-in-Last-Out (FILO).

Each purchase releases the next card in the stack.

TGSwap Tokens   Random Draw   Burn

✦ Common
✦ Uncommon
✦ Rare
✦ Exotic
✦ Legendary

100% of ERC20 TGSwap Tokens are burned after being exchanged for Random Draws.

Divestment. TGSwap Tokens may also be divested at the Liquidity Pool.

TGSwap Tokens   Liquidity Pool   Burn

There is a 15% Contract Fee upon divestment. 10% of divested tokens are burned and 5% are redistributed to that collection's NFT holders.

Random Draw pricing. A Pricing Oracle will assign the Random Drop price based on current value of TGSwap Tokens at the Liquidity Pool adjusted for level of Rarity. One Random Draw for a Rare will be priced 115% of the value of a Pack, in TGSwap Tokens, at the pool

Random Draw prices for Common, Uncommon, Exotic, and Legendary cards will be adjusted by Rarity.

PRICING ORACLE   LIQUIDITY POOL   RANDOM DRAW

115% of Tenshi value adjusted by Rarity

Liquidity. A TGSwap Token Liquidity Pool will be established by smart contract at the Public Presale.

PRODUCTION RUNS

Founder's Run. Limited runs distributed to Community Members leading up to the Go-Live day.

Promotional Exclusives. Limited runs distributed by Founders, Affiliates, and raffle to raise awareness and establish a strong user-base before the Private Sale.

Special Release. Factory sets to reward key participants and raffle winners.

Presale Exclusives. An exclusive set of five (5) variant NFTs which will only be minted during the Presale.

Collection One: Knights of the Veil. Our initial Collection. 50 NFTs with five levels of Rarity; Common, Uncommon, Rare, Exotic, Legendary. Released on the Go-Live day.

[See Appendix: Tokenization Tables](#)

8

Community Members

Founding Followers, Early Birds, and those who sign up through the Get Involved link. If you're reading this before the Private Sale, it's likely you're on this list.

Receive free NFTs during promotional giveaways and airdrops, in time to earn Token Reward from the Private and Public sale events.

Default Roles. Default Roles are fulfilled in the marketplace.

Distributors. Earn Token Rewards by opening Cases, Boxes, and 6-Packs.

NFT Holders. Earn Token Rewards by holding NFTs from the Founders Run or Collection One: Knights of the Veil.

Traders. Buy, sell, or trade ERC20 TGSwap Tokens, ERC20 Cases, Boxes, 6-packs, or ERC721 NFTs.

Founders and Developers. Receive a percentage of the Royalties.

**Community Roles.** Community Roles are initiated by signing up at tenshigirl.io.

Affiliates. Earn a percentage of the Transaction Fee by participating in the Affiliate program.

Gamers. Play at tenshigirl.io to develop NFT Rarity, improving potential NFT value.

Artists. The Primary Artist of each NFT may receive a percentage of the Royalties.

Signup at https://tenshigirl.io/get-involved.html
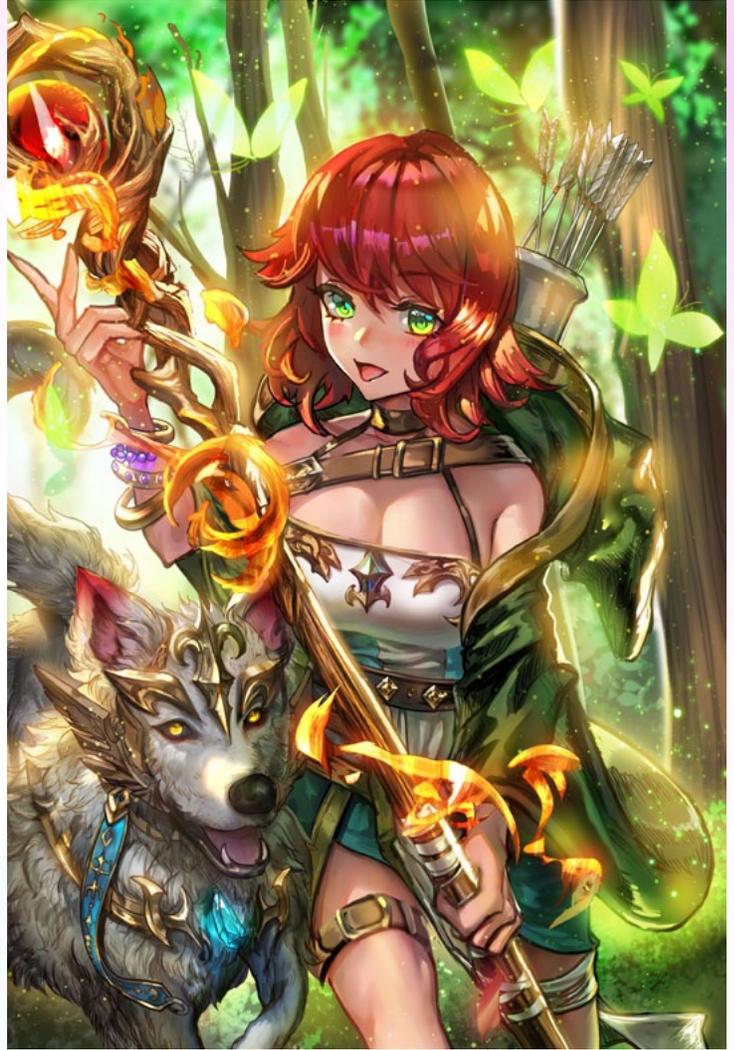

Token Rewards

Token Rewards are delivered in NFT Holders wallets in the currency used for the transaction. They represent a percentage of their TGFund Token: the Founders Token or the Collection One Token. Token Rewards are distributed to the 8th decimal, rounded down.

[See Appendix: NFTs by Token Rewards](#) ⌁

Community Members earn Token Rewards in two ways.

NFT Holders

50% of the Founders Token and 40% of the Collection One Token are distributed among all NFTs. Token Reward is relative to the NFTs Token Reserve, Production Run, Rarity, and Scarcity.

- ✦ Get these rewards by holding NFTs from the Founders Run or Collection One: Knights of the Veil.

- ✦ NFT Token Rewards may not be traded separately from their assigned NFT.

- ✦ When an NFT is sold or auctioned, the Token Reward passes to the new Owner.

Example. Our most valuable tokens are the Collection One Legendary Golds, one of which is pictured here.

That NFT is a 1:3 Promotional Exclusive and has a Token Reward of 0.01904761.

The holder will get almost 2% of the Royalties for all future transactions of any NFT in Collection One (299,153 NFTs).

The Legendary Golds will be distributed by raffle. Get a ticket at our **Early Bird Sale**, Private Sale A, and Private Sale B. ⌁

Distribution

30% of the Collection One Token is awarded to Distributors who open Cases, Boxes, and Packs. Token Rewards exists as ERC20 TGFund Token in their wallet of choice.

This Token Reward may be held for a percentage of Royalties or may be traded on exchanges which list ERC20.
See Appendix: Distribution Rewards ⌁

Founders and Developers

30% of the Founders Token and 20% of the Collection One Token are reserved for the Founders. 20% of the Founders Token and 10% of the Collection One Token are reserved for Developers. Token Reward exists as ERC20 TGFund Token.

Founders and Developer Token Rewards may be traded on exchanges which list ERC20.

Game play

Game play technology

Initial game play will be a 2D environment using HTML5, CSS3, and javascript. This will allow us to provide entertaining graphics and sounds while keeping the development requirements minimal.

Characters

Characters are divided by Rarity, Faction, and Element, as denoted by card graphics. Each character will have a name, image, character description, and class description. We will test the advantages of *bishoujo* game play with the introduction of personality characteristics in the form of Attitude and Temperament.

Character statistics include:

✦ Energy	✦ Defense Style
✦ Health	✦ Magic style
✦ Class Offensive	✦ Strong Against
✦ Class Defensive	✦ Weak Against
✦ Attack Style	
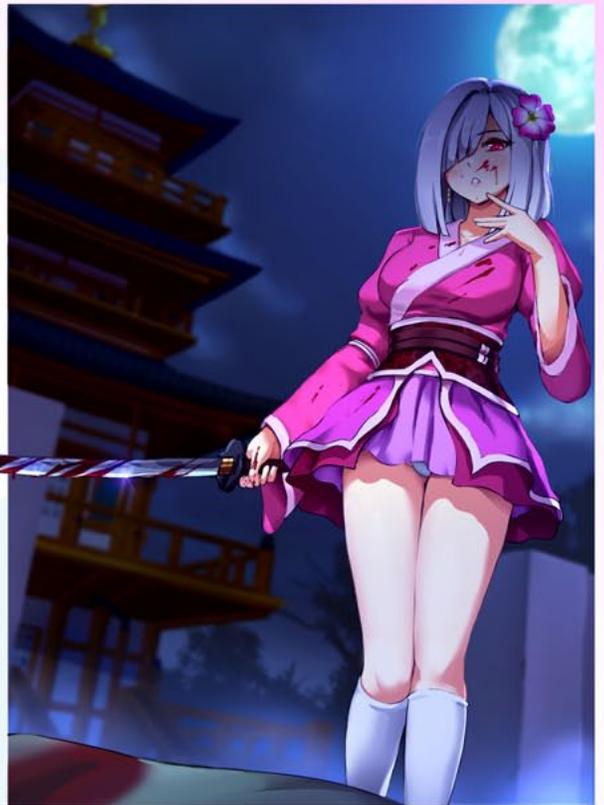

NFTs are unique and can be improved with game play!

Combat

Holders of any TenshiGirl NFT may engage in combat. Each combat uses a portion of the NFTs daily Energy. Game play will include PvE and PvP.

✦ Melee: One vs. One	✦ Arena: Many vs. Many
✦ Trial: One vs. Many	✦ Brawl: Free for All

These mechanics provide a unique opportunity to NFT collectors; primary stats improve with use.

Merging

An Owner may merge two NFTs of matching Product and Rarity. The gaining NFT may select between skills, gain a small bonus to statistics, and 100% of the merged NFT's Token Reward. Once the Merge is complete, the merged NFT is burned.

The Founders Run Collection will not be eligible for merging.

Leveling

When enough statistics increase to the next level of Rarity, the card will 'level.' This means NFT Rarity may be improved, allowing Common cards to reach Legendary status with enough play. When Rarity improves, the NFT image is enhanced with a new Frame and Element graphics.

Market Phases

The rollout will occur in three phases. Collection One Pre-Market, Market, and Post-Market.

Collection One Pre Market

The Pre Market phase includes all promotional and token offerings leading up to the Go-Live day.

During the Pre Market phase, we will offer our scarcest tokens and exclusive artwork by our finest artists. Exclusive art will only be minted during the Pre Market phase.

Founders Token Allotment

Founders Run TGFund Token - 1.00000000

Exclusives NFT Holders 50% · Founders 30% · Developers 20%
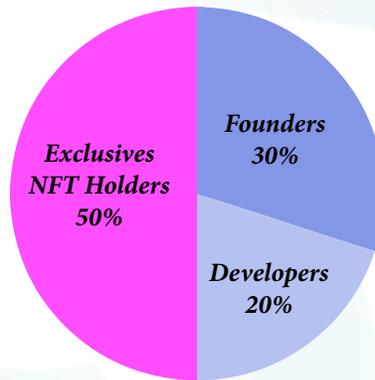

Founders Token Holders receive a proportionate share of a 10% Royalty on all after-market transactions of all Founder's Run, Promotional Exclusives, and Special Release NFTs.

Collection one Marketplace

The tenshigirl.io marketplace will be made available to the public on the Go-Live day.

Collection One Token Allotment

Collection One TGFund Token - 1.00000000

Collection One NFT Holders 40% · Collection One Distribution 30% · Founders 20% · Developers 10%
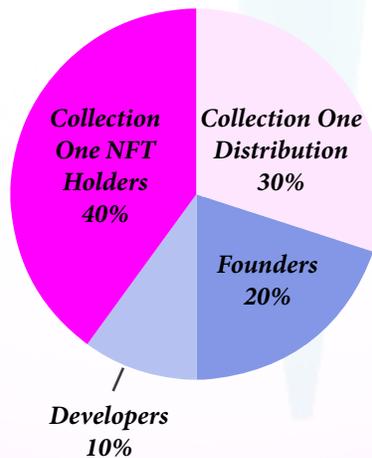

Founders Token Holders and Distributors receive a proportionate share of a 10% Royalty on all after-market transactions of all Public Presale Exclusives and Collection One: Knights of the Veil.

Opensea and an in-house TenshiVerse NFT marketplace will cater to the Post Market. As Polygon adoption increases, we expect other NFT marketplaces to begin relisting these Collections. Additionally, we expect to provide Affiliates with working Post-Market templates, allowing them to sell our NFTs from their own domains.

Royalties. A 10% Royalty is processed during each transaction. 60% of the Royalties are distributed to TGFund Token holders, 20% to Founders, 10% to Developers, and 10% to the Artist.

Royalty

10%

In Closing

From the team,

Thank you for your interest in TenshiGirl.

We will provide many ways to participate in the Tenshiverse community in the coming months. Card traders and collectible enthusiasts, casual gamers, anime and fantasy fans, Ethereum and Polygon backers and NFT hodlers, established digital artists with influence and upcoming anime talent, and fans of our artists all have a place in the ecosphere.

Be sure to sign up and share in the value of our platform.

We'll see you online!

Xero, guyinthetie, 3stars
